Continuation of 11. does NOT place the application in condition for allowance because: Applicant's comment that Reece fails to teach the step of claim 1 is not persuasive for the following reasons:

1) In step (a), the term "at a retail business", this is taught in Fig. 1, 10 (CPF); col. 3, lines 60-65, "a central processing and switching Facility is provided that serves as an information depot and intermediary or interface between users and service providers to allow seamless communications transfer between the different providers and users"; col. 5, lines 30-55 "... CPF 10 may also be composed of a multitude of smaller distributed facilities". Note that in specification, page 4, lines 10-13, it says that "a retail business is defined as a business providing retail services and having one or multiple locations. Those skilled in the art will appreciate however, that the method according to the present invention could be applied to any 3rd party non-service provider". Clearly, the CPF is a non-service provider, having one or more multiple facilities, and providing service to the customer thus qualities to be a "retail business". Alternatively, it would have been obvious to a skilled artisan to call this 3rd non-service provider and having a multiple locations a retail business as mere similar term for providing business to a customer.

2) In step (a), "providing a wireless transceiver device to a customer", this is taught in col. 3, lines 25-30 "..providing wireless mobile communications devices ", col. 3, lines 60-67, col. 4, lines 6-45. Clearly, with the CPF serve as a payment, billing agent between users and different service providers, processing the switching of the different service providers, and serves as an "intermediary" between the users and the different service providers so that "... the user without requiring individual contract agreements between every user and every service provider " {see col. 4, lines 9-11}, it's inherently included or would have been obvious that the device is provided by the CPF since there is no contract between the user and the service providers.

3) step (b) is taught in col. 4, lines 15-20, 25-47, col. 6, line 65 to col. 7, line 20, col. 13, lines 50-55, col. 17, lines 10-19., Fig. 12.

4) step (c.) is taught in col. 3, lines 37-42,

5) step (d) is taught on col. 4, lines 38-42,

6) step (e) is taught on col. 4, lines 10-12, 38-42, col. 5, lines 30-35.

Note that on col. 4, lines 25-45, and col. 5, lines 30-50, CPF 10 serves as switching facility and facilitate the flexible switching between wireless communication service providers, therefore; it's inherently included or would have been obvious to say that CPF 10 provides the service to the wireless transceiver device of the customer or make the service work between the customer and the service provider since the role of the CPF is keeping track of payment and billing agent between the users and service providers. Clearly, the service cannot be activated if the billing or payment by the CPF is not ready. Applicant's comment that CPF receives communications and provides services rather than receiving and providing services, is noted, however, in view of the teachings on col. 4, lines 6-45, with the goal of not requiring the user to sign individual contract agreements with every service provider, it would have been obvious that CPF has to sign contracts with many service providers and then provides that service to the user based on the selection of the user for the system to work effectively and efficiently. So, it's more than just receiving communication but the capacity for carrying out the service based on a certain contract.
